

Medes Club | Usability & Validation

A summary of key findings and design iterations based on moderated usability studies.

1. Executive Summary

- **Objective:** To validate navigation efficiency, 'Calm Mode' effectiveness, and 'Quick Access' discoverability on the high-fidelity prototype.
- **Methodology:** Moderated, remote think-aloud protocol with 5 participants.
- **Key Insight:** While core flows were successful, users experienced minor friction in locating the membership tier information.

2. Key Findings & Insights

Finding 1: Users scanned the header but overlooked the secondary navigation.

- **Observation:** Users scanned the header but overlooked the secondary navigation.
- **Data Point:** Average time-on-task for "Find Membership Tier" was 58 seconds.
- **Design Iteration:** Increased button contrast and integrated membership callout into the primary navigation header. (Accompanied by a small, clear "Before/After" thumbnail showing the change in button design).

Finding 2: 'Calm Mode' was unanimously praised for reducing visual clutter.

- **Observation:** Users expressed relief at the simplified interface during high-stress wellness scenarios.
- **Data Point:** 80% task success rate achieved on initial trial within Calm Mode, increasing to 100% post-iteration.

3. Quantitative Data & UI Overview

Conclusion: Targeted iteration successfully resolved structural friction, streamlining overall user task completion.
