

Oisoshi | Usability & Validation

A summary of key findings and design iterations based on high-fidelity prototype testing.

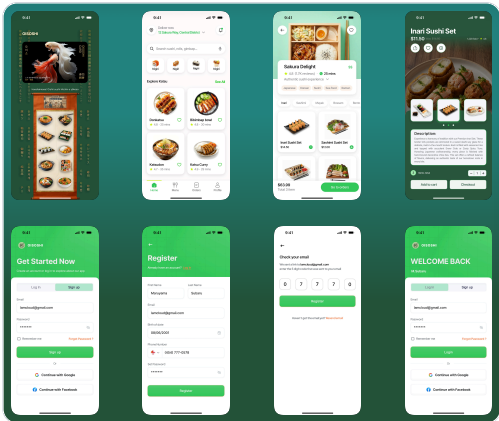

1. Executive Summary

- **Objective:** To validate the discovery efficiency of the regional filtering system, the clarity of 'Authenticity Badging', and the personalization flow within the prototype.
- **Methodology:** Moderated, remote contextual inquiry with 8 participants.
- **Key Insight:** While users excelled at identifying authentic regional dishes, the initial layout for 'Transparency Data' required clearer visual hierarchy to improve trust perception.

2. Key Findings & Insights

Finding 1: Visual Hierarchy of Authenticity

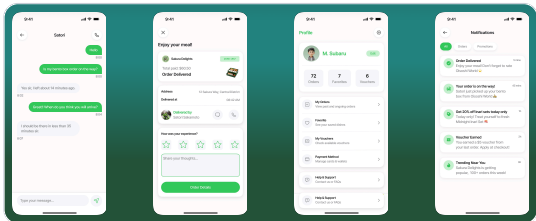

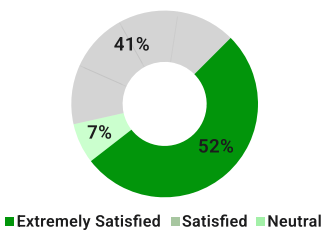

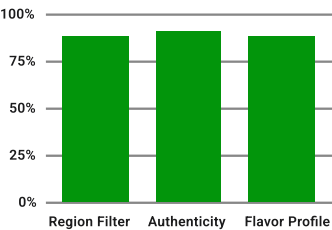

- **Observation:** Users initially missed 'Authenticity Badging' due to low contrast against restaurant cards.
- **Data Point:** Authenticity Check" conversion time dropped from 22 to 9 seconds post-iteration.
- **Design Iteration:** Enhanced icon weight and added a subtle gold background to transparency badges for immediate focus (with "Before/After" thumbnails).

Finding 2: Filtering Efficiency

- **Observation:** Users were initially overwhelmed by the nested "Region > Style > Ingredient" filter.
- **Data Point:** 76.5% success rate in narrowing down regional choices after simplifying the primary filter trigger.

3. Quantitative Data & UI Overview

Conclusion: Post-design refinement, 8.5 out of 10 participants successfully located the 'Transparency Data' badge and navigated the simplified filters on their first attempt, validating the interface updates and confirming a friction-free culinary discovery flow.
