

Interview Data: The Living Meals Project

Synthesized findings from a behavioral study on nutritional tracking and macro management.

Participant Profile & Methodology

• Participants	12 (6 female, 6 male)
• Age Range	24-42
• User Type	Health-conscious users actively tracking nutritional goals and dietary restrictions.
• Method	1-week diary study and remote usability testing on meal-ordering habits.

Key Interview Questions (Top 3)

- 🗣️ How do users bridge the gap between tracking macros and quick meal customization?
- 👁️ What visual cues do users need to verify ingredient transparency?
- 📋 How do dietary restrictions influence real-time menu decisions?

Affinity Mapping / Thematic Analysis

Actionable Insights (Derived from Data)

- ✔️ Insight 1: Streamline macro-syncing to transition users from manual entry to automated tracking faster.
- ✔️ Insight 2: Integrate a dedicated transparency view highlighting exact macro counts and ingredient sourcing.
- ✔️ Insight 3: Build an adaptive goal engine that updates meal recommendations in real-time.
