

Interview Data: Oisoshi Project

Synthesized findings from a longitudinal behavioral study on regional culinary exploration.

Participant Profile & Methodology

• Participants	8 (5 female, 3 male)
• Age Range	22-50
• User Type	High-frequency delivery users seeking authentic regional cuisine.
• Method	3-day diary study tracking meal cravings, followed by remote contextual inquiries.

Key Interview Questions (Top 3)

- 🗣️ How do users navigate the gap between a "craving" and an authentic regional menu item?
- 👁️ What visual or data cues are needed to verify ingredient quality?
- 🔄 How does a user's "Taste Profile" influence their real-time decision-making?

Affinity Mapping / Thematic Analysis

Cluster A: Discovery Opportunities

"I struggle to find authentic regional food; most apps just push generic fast food."

"The search filters are too broad; Specific regional cooking styles are needed."

Cluster B: Trust & Quality Indicators

"To me, quality is defined by proper ingredient sourcing."

"For me, ingredient transparency justifies a premium service."

Cluster C: Personalization & Habitual Workflow

"I want the app to understand my flavor profile, not just my previous order history. Tailoring everything to the algorithm of past orders"

"The onboarding was too generic to reflect my culinary background."

"I abandon my cart without smart side suggestions."

Actionable Insights (Derived from Data)

- ✅ Insight 1: Implement a tiered filtering system (**Region > Style > Ingredient**) to transition users from "browsing" to "deciding" faster.
- ✅ Insight 2: Integrate a "Transparency Data" view highlighting ingredient sourcing and quality metrics.
- ✅ Insight 3: Predictive Flavor Matching: Build a dynamic "Flavor Profile" engine that learns from user ratings to prioritize regional dishes that match their specific taste preferences.
